

Delete a Generic CRM integration (/v2/crm/integrations)

DELETE /v2/crm/integrations

Asynchronously deletes a CRM integration and all its associated CRM objects (Accounts, Contacts, Deals, Leads, and Users).

This endpoint gets the clientRequestId generated by you as the request identifier. Use this to check the status of the delete request by calling the /request-status endpoint,with the clientRequestId.

A status of DONE indicates that the integration and all its associated crm objects have been successfully deleted. This may take up to 24 hours to be deleted.

When accessed using a bearer token, this endpoint requires the 'api:crm:integration:delete' scope.

Example

DELETE https://api.gong.io/v2/crm/integrations?clientRequestId=1234&integrationId=6286478263646
