

# Register a Generic CRM integration (/v2/crm/integrations)

**PUT** /v2/crm/integrations

Creates your CRM integration with Gong. Returns an integrationId, which should be used in requests to the CRM API to enable correct association of CRM data.

Multiple CRM integrations are not supported. To create a new integration, delete the old one first ( **DELETE** /v2/crm/integrations ).

This includes if you have integrated with Gong using one of the native CRM integrations such as HubSpot or Salesforce.

When accessed using a bearer token, this endpoint requires the 'api:crm:integration:register' scope.
